

OptumRx Vigilant Drug Program

Non-essential patches and creams strategy

Effective January 1, 2021

Thousands of medications are available today with even more entering the market — sometimes at a higher cost without additional value. OptumRx can help ensure that your pharmacy benefit dollars cover only the most clinically appropriate and affordable medications.

Non-essential patches and creams strategy — Excludes select products from coverage that are available in the market but may not be approved by the U.S. Food and Drug Administration (FDA). These expensive topical pain preparations and kits are made up of ingredients that are inexpensive when sold individually and offer little clinical value versus other well-tested, FDA-approved agents.

*Programs are also available for clients who prefer prior authorization rather than an exclusion strategy.
